50 MILLION PARKER PENS

—the Public's No. 1 Choice

PARKER'S HALL OF FAME

Early Patents

- Dec. 10, 1889—First Parker Feed Patent
- Mar. 18, 1890—Over-Under Feed
- Mar. 30, 1891—Improved Over-Feed
- Dec. 12, 1893—Parker Lucky Curve
- June 28, 1898—Slip-fit Outer Cap
- Apr. 4, 1899—Jointless Pen
- July 17, 1900—Tapered Interior of Cap
- May 3, 1904—First Self-Filler
- Jan. 3, 1905—Spear-head Feed
- Apr. 11, 1905—"One-Hand" Press-Button Filler
- May 27, 1907—Level Lock Clip
- Apr. 25, 1911—Improved Lucky Curve Feed
- June 4, 1912—First Safety Seal Cap
- Sept. 5, 1916—Washer Pocket-level Clip
- Aug. 4, 1920—Parker Mechanical Pencil

PARKER'S HALL OF FAME

More Recent Achievements

- 1914—Pioneered Colors in Pens
- 1921—Parker Duofold—popularized Color in Pens and matched Pencils, Pen Guarantee and Oversize Barrel; doubled unit of Pen and Set sales
- 1922—Parker First with Year-round National Advertising
- 1927—Parker Ball and Socket Desk Set Bowl
- 1931—Parker Quink—the Pen-Cleaning Ink
- 1932—Parker Vacumatic—first practical sacless self-filler—styled in Laminated Pearl
- 1933—Full Television Ink Supply
- 1936—Sealomatic Socket
- 1938—Gold-capped Imperial Sets
- 1939—First Da-Lite Display Cases
- 1939—Writefine Pencil
- 1940—Parker "51"—first Streamline* Pen with Tubular Gold Nib enclosed like the fine works of a watch
- 1940—Parker "51" Ink for "51" Pen only—dries almost instantly
- 1940—Sacless Mechanism in Parker Duofold
- 1940—Jewel Gift Boxes—Finest of any Set Line

If we told you that The Parker Pen Company was started with only a thousand dollars and became the world's largest manufacturer of Fountain Pens, (and this is indeed the case), you could not escape these five convictions:

1. *Its products must be superior.*
2. *Its policies must be sound, yet liberal.*
3. *Its management must be able and progressive.*
4. *Its retailers must be satisfied and prosperous.*
5. *It must be a good business with which to associate your own business,—a good name with which to associate your own name.*

Now add one more factor—one that means as much, perhaps, as all the others combined—and you can purchase Parker Pens and Sets with utter confidence in their fine performance and ready salability at all times. That factor is this:

Vote after vote and pen census after pen census among thousands of pen users over widely separated areas prove that the Parker Pen is the Public's No. 1 Choice!

As you look through this Catalog you will see why this is true.

Guaranteed for Life ♦

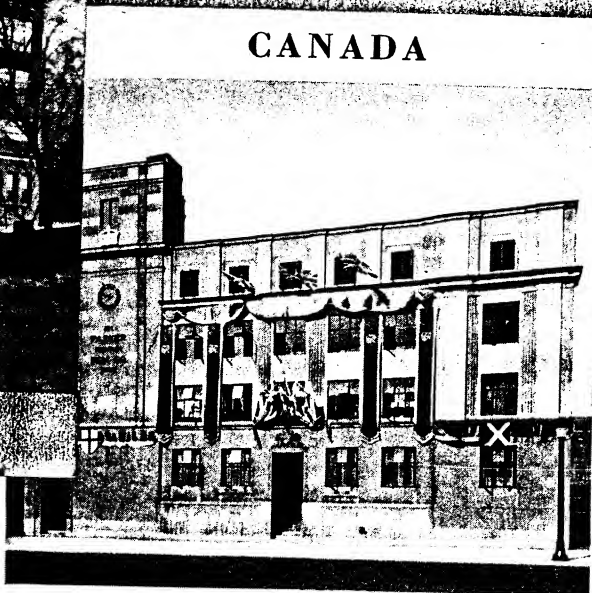

♦ Parker's BLUE DIAMOND is our Life Contract with the owner Guaranteeing to make good any damage to the pen (except loss or willful abuse) subject only to a charge of 35 cents for postage, insurance, and handling provided complete pen is returned for service.

Pens marked with the Blue Diamond include both Pocket-Pens and Desk-Pens at \$8.75 and up. Parker Pens at lower prices and all Parker Pencils are Guaranteed Mechanically Perfect.

SACLESS FOUNTAIN PENS

Comprise About 85% of Today's Market

Prior to 1932, no pen maker, despite 267 attempts, was ever able to make important headway with a SACLESS self-filling pen because none had developed a sacless mechanism as satisfactory as the rubber sac pen. But in 1932, Parker added importantly to its long list of "Firsts" by introducing an utterly different sacless pen, basically better than any sac or sacless principle theretofore known. It contains no piston-pump, no valves, no packing—instead a simple diaphragm sealed in the top where ink can never touch or foul its working parts.

This pen—called Parker Vacumatic—gave a waiting world three cardinal improvements:

1. *Extra ink capacity with no increase in barrel size.*
2. *Full Television Ink Supply—showing the level of ink.*
3. *"One-Hand" Sacless Filler—easiest of all to operate.*

Its fine performance and obvious advantages won public acclaim by leaps and bounds. Soon not only retailers as a whole got behind it, but rival makers also joined the sacless pen parade. Inasmuch as the Parker Vacumatic is patented, the others had to fall back on the old-time piston-pump principles.

Hence, it would be a mistake to judge the Parker Vacumatic by the standards of any other sacless pen. These two factors alone prove there is nothing like it in principle, performance or popularity:

1. **NINE YEARS** on the market with undisputed leadership and ever-increasing sales.
2. **SUCH SWEEPING POPULARITY** and proven perfection that Parker now makes all pens in the catalog SACLESS—Pocket-Pens and Desk-Pens (excepting the lowest priced models). The astounding Parker "51" Pen announced for the first time on page 6 of this catalog is also a Sacless Pen.

COMMON DENOMINATORS

All Parker Pens have 14K Gold Nibs tipped with "oil-smooth" Osmiridium.

All Parker Pens—Sac or Sacless—have a "One-Hand" Filler.

All clips are Pocket-Level—hold pens low and unexposed—trim for civilian dress and the only line wherein all pocket models actually conform to Armed Service regulations which require that pocket flaps of uniforms be kept buttoned.

All Parker Pencils have Parker Writefine Mechanism and Writefine Leads.

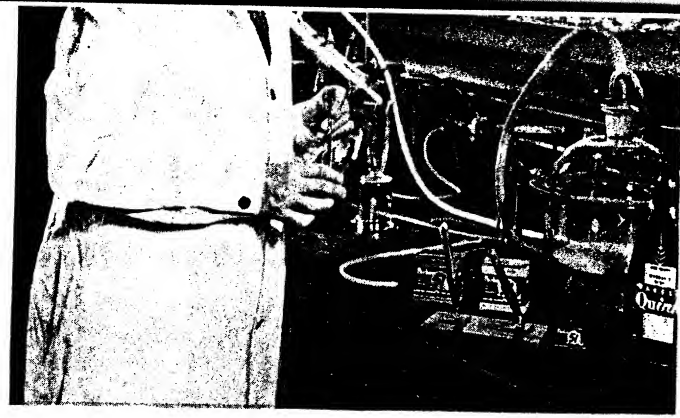

All Vacumatic Pen and Vacumatic Pencil Barrels are bored out of solid rods of Permanite—no veneered tubing.

NOTE: The sensational new Parker "51" Pen is made of methyl methacrylate, a beautiful new DuPont plastic called Lucite. Lucite provides the necessary chemical resistance to the fast drying

M. R. PICKUS,

G. H. SAYLER, M.S.
Chief Chemist

NOW NIBS OF FINER TEXTURED 14K GOLD TIPPED WITH "OIL-SMOOTH" OSMIRIDIUM

Today America's great refiners of precious metals are learning from Parker secrets hitherto unknown. Scientific research in our metallurgical laboratories has led to history-making improvements.

For example: Parker now insures the purity of gold used in the manufacture of gold nibs by means of spectrographic observations, the same method by means of which Helium was discovered on the sun. Studies of the crystalline structure of precious metals have enabled our metallurgists to produce a resilient nib of finer textured gold, free from brittleness. Other studies have led to the development of vastly superior Osmiridium pellets for tips on the gold nibs. They cannot wear scratchy in a lifetime because they possess a uniformly fine crystalline structure.

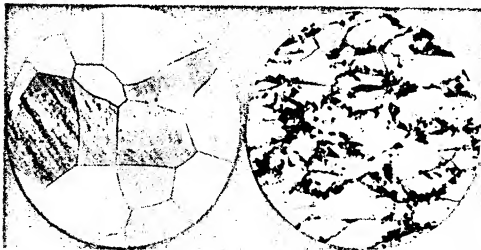

You can actually SEE these and other Parker improvements in photomicrographs, enlarged 100 and even 3000 diameters, as we study them here. They have amazed refiners and inspired them to revolutionize their methods.

More important still, the public can tell the difference merely by writing with the Parker! This was conclusively proved by an independent research organization which, after masking the four leading makes of pens, had them tried by hundreds of men and women, coast to coast.

The result: Parker won first choice over all other pens tested—had a public preference of 85.1% greater than the second largest selling pen in America.

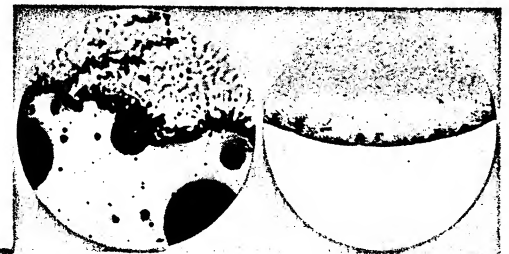

And remember—none of these hundreds of pen users knew the make of any pen tried.

Actual Photomicrographs from Parker's Metallurgical Laboratory

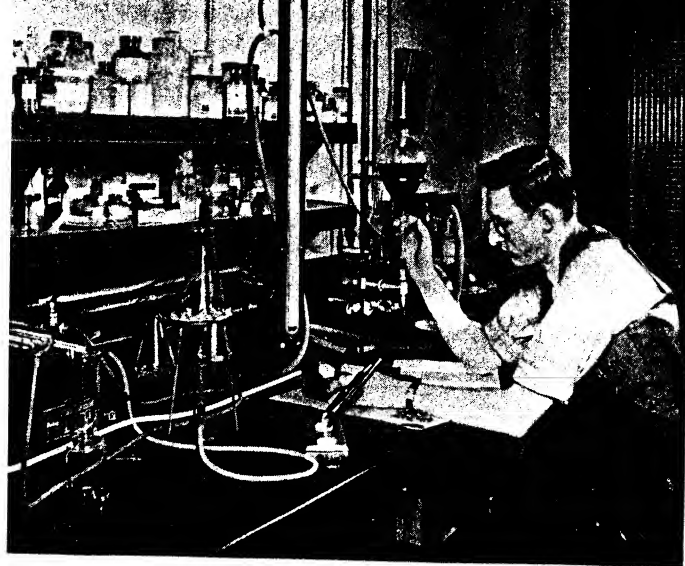

ABOVE TO LEFT—Crystalline structure of overheated, coarse-grained 14K gold. **TO RIGHT**—Scientifically controlled crystalline structure of Parker's 14K gold nib. The properties of these 14K golds are just as different as their photomicrographs: the first is inelastic, lifeless; the second, springy, resilient. In both views magnification is 100 diameters.

BELOW TO LEFT—Photomicrograph of an ordinary Iridium Tip. Notice the craters (black areas) which are a common cause of scratching. **TO RIGHT**—Parker's Osmiridium Tip. Note remarkable freedom from pores. The Parallel lines are not defects, but merely polishing marks. Both views are magnified 100 diameters.

ABOVE TO LEFT—An ordinary weld between Iridium Tip and gold nib. Notice the many crater-like voids in the welded gold. This condition is responsible for tips snapping off. **TO RIGHT**—Parker Osmiridium tip, electrically fused to gold nib. Notice perfect, inseparable weld and complete absence of craters. Both views magnified 100 diameters.

PARKER'S "One-Hand" VACUMATIC FILLER IS THE ONLY SACLESS FILLER OF ITS KIND

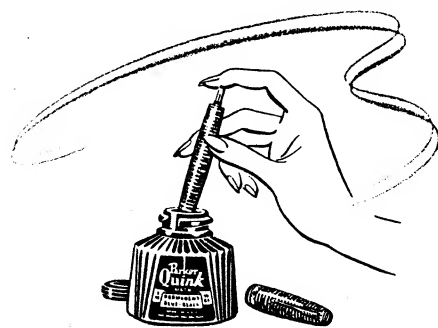

Parker spends tens of thousands of dollars for modern research and development, maintaining a metallurgical laboratory, a chemical laboratory, and an engineering laboratory. No other pen maker we know attempts the scientific explorations which go on here daily to safeguard and improve the Parker products, and give the world finer, handsomer, more durable and convenient writing instruments.

One example is the Parker Vacumatic mechanism—the now famous "One-Hand" Sacless Diaphragm Filler which has revolutionized the pen world. Another example is the world-stounding new Parker "51" Pen—like a Pen from another planet—announced for the first time and fully pictured and described on page 6.

Four other Parker developments are:

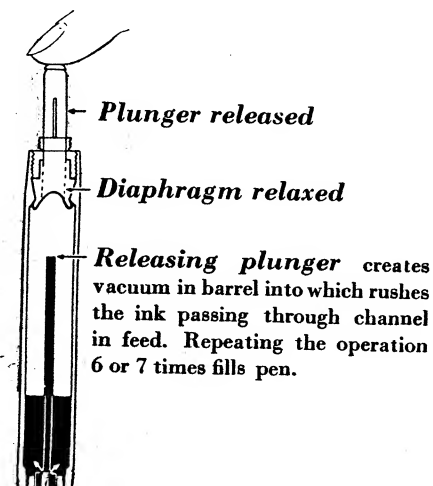

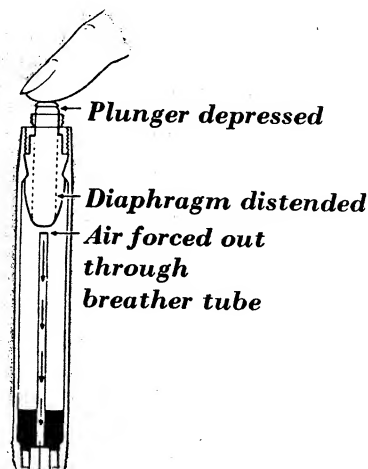

1. **PATENTED DIAPHRAGM FILLER**—When plunger is pressed by the finger the diaphragm distends, forcing air out of the pen barrel. Releasing plunger creates a vacuum in barrel into which rushes the ink. Only a few strokes and it's filled. All moving metal parts are sealed away from possible ink corrosion.
2. **PATENTED FULL TELEVISION INK SUPPLY**—tells when to refill hours in advance.
3. **PATENTED LAMINATED PEARL STYLING**—exclusive in design and manufacture.
4. **POCKET-LEVEL ARROW CLIP**—handsome in appearance, holds pen low in pocket, trimmest for civilian dress and service men's uniforms, conforming to military regulations.

Graphic Representations of Vacumatic Filling Principle

"One-Hand" FILLER
the easiest, most convenient
of all to operate

Pen is filled by the expansion and contraction of a simple recoiling diaphragm. This patented invention replaces the rub-

The Parker "51"

makes it

LIKE A PEN FROM ANOTHER PLANET

So unique and so beautiful there is nothing to compare to it—so good it cannot be improved by any known method!

Here you behold for the first time in any catalog the new Parker "51"—the most astonishing pen ever produced—a wholly new departure from any pen hitherto known.

All the Parker laboratories—engineering, chemical and metallurgical—collaborated for eleven years to develop this history-making union between a new precision instrument and a quick-drying ink superbly adapted to it, but totally unsuited to any other pen.

This ink—called Parker "51" the same as the pen—dries almost instantly ON PAPER—Dries as you write. It is fully described on Page 32. While Parker "51" Ink will not function properly or safely in any other pen, the Parker "51" Pen will handle ANY writing ink to perfection.

Thus this Pen's amazing performance, as well as its extraordinary appearance, causes such a stir wherever the Parker "51" is demonstrated that people cluster round and ply the retailer with questions.

The Parker "51" is unlike anything ever seen and everywhere—in clubs, hotels, on trains and in planes, in offices, in homes, at parties, conventions, and other gatherings—it's the talk of the hour. People are saying:

"A really new fountain pen—as streamlined as a high diver."

"Yes, and its ink dives into paper so fast it dries as you write."

"That light, smart, sterling silver cap is a touch that's positively regal!"

"It writes with less effort than any other fountain pen I ever used."

"Yes, it's a split-second starter, too."

"It traps the ink inside so it can't get on your fingers."

"What a breath-taking gift."

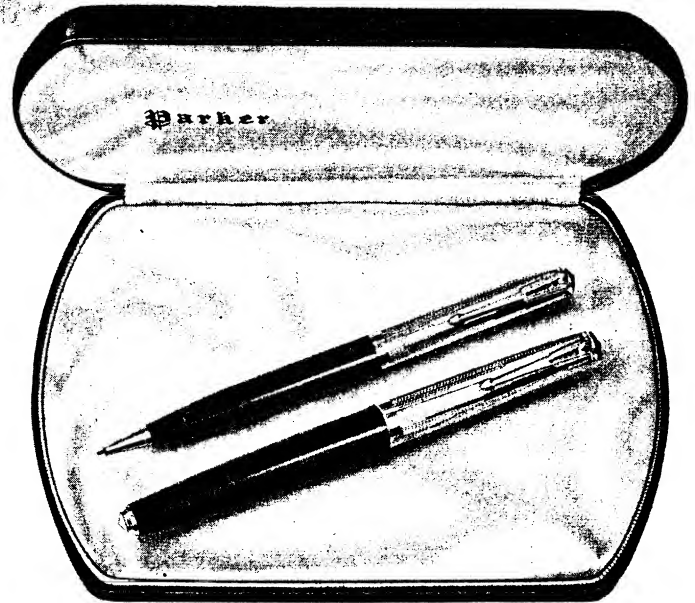

The supporting shell over the gold nib keeps it rigid and prevents "flexing." For that reason the Parker "51" Pen is available only with manifold points but in the complete range from extra-fine to broad.

World Premiere 10 Years Ahead!

PARKER UTILITY WRITEFINE PENCIL

Here is the Pencil that has been needed for a long time. It employs the double-length, super strength Writefine Leads, therefore requiring less refilling and writes a finer line. These new leads are $2\frac{3}{4}$ " long, 39% thinner and of 21.7% smaller diameter than old-style leads.

Its exclusive long, semi-automatic Eraser that like the lead, can be turned out as used, has already made the Parker Writefine the favorite Work Pencil of hundreds of thousands of students, salesmen, estimators and office workers. Simple to operate, with strong clutch that holds the lead firmly and prevents its wobbling or wearing flat on one side.

Slender balanced barrel with threaded finger-grip to prevent finger strain and pencil-slip. Sales through retailers to firms and corporations bearing buyers' imprint or message, as well as to individuals, are growing by leaps and bounds.

Extra-long Leads
Twice as strong—about half as thick

A Sensational Announcement Launching

PARKER'S DESK-PEN SET JUBILEE YEAR

This history-making Parker policy—no charge for JUBILEE bases when Desk-Pens are ordered—this astonishing move marks the beginning of a New and Greater Era in the universal use of Desk-Pen Sets.

Desk-Pen Set sales have taken an inspiring upturn in the past few months due to two vital improvements introduced exclusively in Parker Desk-Pen Sets:

1. The air-tight Sealomatic Socket that prevents the drying out of the Pen Point.

2. The Parker "51" Streamline* Desk-Pen having its tubular nib enclosed in a bath of ink within the pen itself.

We now invite Parker retailers and their customers to join us in a world-wide DESK-PEN SET JUBILEE to celebrate these two triumphs, and to launch an Era in Desk-Pen Sets undreamed of before!

We believe this JUBILEE, these two Parker improvements, and this revolutionary Parker policy of Desk Bases without charge, will at least double and perhaps triple sales of Desk-Pen Sets.

This sensational new price policy opens a vast new market in homes and offices for replacing outmoded inefficient desk-pens by offering a new modern desk-pen Set for the price of the pen alone.

Parker's revolutionary sales plan will delight your present customers and win hosts of new ones. Please note carefully however:

1. The offer of Desk Bases without cost applies only to the Desk-Pen Sets in this catalog marked "JUBILEE SPECIALS," and only of course, when the Desk-Pen corresponding to the base is purchased.

2. These "JUBILEE SPECIALS" are confined to Blue Diamond Vacumatic Desk-Pen Sets at \$8.75, the Parker "51" Streamline* Desk-Pen Sets at \$12.50, and the Double Desk-Pen Sets at \$17.50 containing two \$8.75 Desk-Pens and at \$25.00 containing two \$12.50 Desk-Pens.

The foregoing includes the 34 different models shown on Pages 22, 23, 25, and Model LLF on Page 29.

In all other Desk-Pen Sets there is a moderate charge for the bases.

However, these latter values from \$5 up, together with the "JUBILEE SPECIALS," are so utterly without equal that thousands more can now afford a beautiful Parker Desk-Pen Set.

Parker Desk-Pen Sets are only sold as complete units. We do not sell bases separately. The desk-pens and sockets on the right hand page should be ordered only for repair or replacement.

ALL PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE due to unforeseen conditions resulting from Defense Armament. Hence, retailers should now anticipate their requirements to the fullest extent.

THE PENS ALONE!

PARKER DESK-PENS

SPLIT-SECOND STARTERS

The ONLY Fountain Desk-Pen Set that ever has, or EVER WILL SATISFY THE PUBLIC is the one in which the pen can be left standing for a long period of time WITHOUT THE INK DRYING ON THE POINT!

There is nothing that irritates the user more than to pick up his Desk-Pen and have it fail to write.

Parker Engineers Have Solved This Problem!

FIRST, The Parker Sealomatic Socket for Desk-Pens with exposed Points (like the Vacumatic and Duofold) actually and effectually seals the Point from Ink Evaporation. This is done by a special, patented mechanism within the socket which functions like the outer cap of a pocket-pen, yet without the use of threads.

SECOND, The Parker "51" Streamline* Desk-Pen accomplishes the same result in reverse order, as it were. It does not require the Sealomatic Bowl because the Point of the Desk-Pen itself is enclosed in a bath of ink, or Ink-trap, within the Point-guard at the tip of the pen barrel. There is nothing to compare with it.

The Parker "51" Streamline* Desk-Pen is the only "natural" Desk-Pen in existence.

We have records of Parker "51" Streamline* Desk-Pens which stood unused in their bowls for weeks, yet started instantly when put to use.

THE FINEST WRITING FLUID EVER DEVELOPED

Parker Quink is rich-bodied and brilliant . . .
 never watery, never gummy

Parker Quink is available in 9 colors: 7 Permanent and 2 Washable colors.

PERMANENT Quink is as permanent as the paper written upon—it protects checks, office records, documents from sunlight and age. The three Quink colors: Permanent Black, Permanent Blue-Black and Permanent Royal Blue are also water-resistant, therefore the SAFEST inks for all business purposes.

WASHABLE Quink—the safest ink for home and school. Washes without trace from hands, clothes, rugs, if scrubbed with soap and water.

Quink

OUT OF THE CHIEF CHEMIST'S TEST TUBE COMES THIS HISTORY-MAKING CREATION IN WRITING INK

- 1—Quink cleanses a Pen as it writes!**
- 2—Quink dries 31% quicker ON PAPER**
- 3—Quink does NOT dry in a Pen!**

In repairing ALL MAKES of fountain pens in our service department we were led to the discovery that about 65% of the pen troubles were due to inks that clog the feeds, corrode the mechanism, and gum the points. We called in some of America's most brilliant scientists. Could an ink be developed that would avoid all this nuisance and expense? They believed that it could, and told us how to proceed.

It was thus that we founded the Parker Chemical Laboratories and began a scientific exploration of inks that consumed 3 years and \$68,000 of our money. We created 1,020

new formulas before we perfected the right one, but we have long since been repaid by the saving in pen repairs and service. For Quink is an ink that does what no other ink can do.

In Quink Parker gives every user of a fountain pen—of a Parker or ANY OTHER PEN—a weapon against pen-clogging. Here's how:

1. A secret harmless agent in Quink dissolves and dislodges deposits left in pens by pen-clogging inks. Quink makes a pen a self-cleaner.
2. By stepped up penetration, Quink dries 31% quicker ON PAPER than average inks, yet resists evaporation, hence does NOT dry in a pen.

PARKER QUINK IS AVAILABLE IN FIVE CONVENIENT SIZES

Size and Packing	List Price Per Dozen	List Price Per Gross	No. Bottles Per Carton	Shipping Wt. Carton Lbs.

PARKER QUINK EQUALS OR SURPASSES THE U. S. GOVERNMENT SPECIFICATIONS IN EIGHT MAJOR WAYS

Extensive laboratory tests definitely prove that Parker Permanent Quink in Blue-Black, Royal Blue, and Black equals or surpasses United States Government Specifications in these eight important ways:

- ★ Parker Quink resists water—even after immersion it remains firm and legible.
- ★ Parker Quink does not clog—it is not gummy and has no sediment, even in the colors.

- ★ Parker Quink is non-fading—is not rendered illegible by subjection to light, as are inferior inks.
- ★ Parker Quink is quick-drying—no unnecessary waiting or smudging.
- ★ Parker Quink is non-corrosive—does not attack the metal parts of your writing instrument.
- ★ Parker Quink is non-deposit-forming—does not leave accumulated sediment in the bottle or in the pen.

*Split-second Starting—
Split-second Drying*

Caution: For use in Parker "51" pen only!

Possibly the most important invention for writing convenience in the last 50 years is the development of Parker "51" Ink.

It eliminates blotting and smudging, it is highly waterproof and sunfast, all colors are permanent and intense. Its "high velocity" gives it high speed penetration into paper. Thus it dries almost instantly as you write—requires no blotting.

Parker "51" Ink was developed especially and solely for use in the Parker "51" Pen. This ink will not work safely or satisfactorily in any other pen regardless of what the makers of other pens may claim.

Parker "51" Ink is available in 4 colors: India Black, Tunis Blue, China Red and Pan-American Green.
